

Grove, R., Braarud, H. C., Slinning, K. (2016). [Feasibility and Acceptability of the Newborn Behavioral Observations \(NBO\) system in well-baby clinics](#). Presented at the 15th World Congress of WAIMH, Prague, June 2016.

The Newborn Behavioral Observation (NBO) System is developed to promote a positive parent-child interaction and enhance parental efficacy. The NBO is relationship based, and emphasizes the infant's strengths and competence. In this study midwives and public health nurses conducted the NBO-intervention at home visits in families at risk for maternal postpartum depression. The study is conducted in cooperation with two municipalities in Norway. The data collection is not yet completed.
